Dis-Connect

Disconnect to connect

Summary	Time	Type	My Role
A product service system that helps you disconnect from mobile addiction	06/2019 - 07/2019	Personal	Primary: UX Design, Product Design, 3D Modeling Secondary: UI Design
Team	Duration	Ji Youn Jung Nayoung Kim Gunwha Lee Jueun Kim	Primary: UX Design, Product Design, 3D Modeling Secondary: UI Design

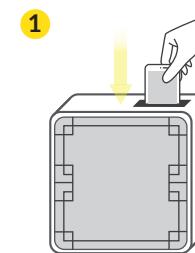

Concept

How could one overcome the Fear Of Missing Out when one could easily be connected through a small mobile screen?

Dis-connection presents a fun twist for people desiring digital alliance. When users insert their phone into the window- shaped device, small 'stars', each representing another person, illuminate through the window. This new concept of networking will motivate people to give a pause, reduce their anxiety and simply relax.

How to use

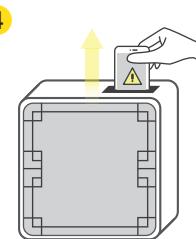

Insert phone to turn on device and get connected with other stars. Once plugged in, your phone will be charged.

Meet with other stars inside your window. The number of stars represent other dis-connected users.

Stay connected longer and gradually create movement of stars. Stars will increase its speed and bump more oftenly with each other.

Using phone will reset your window. Attempt of phone removal will be sensed and a pop-up alarm will appear on phone.

Background

Many users focus too much on satisfying their needs to belong by means of permanent and mindless connection to other people via SNS.

Traditionally in Korea, window stands for both connecting and blocking the world. The pattern used here is called Ajasal.

Solution

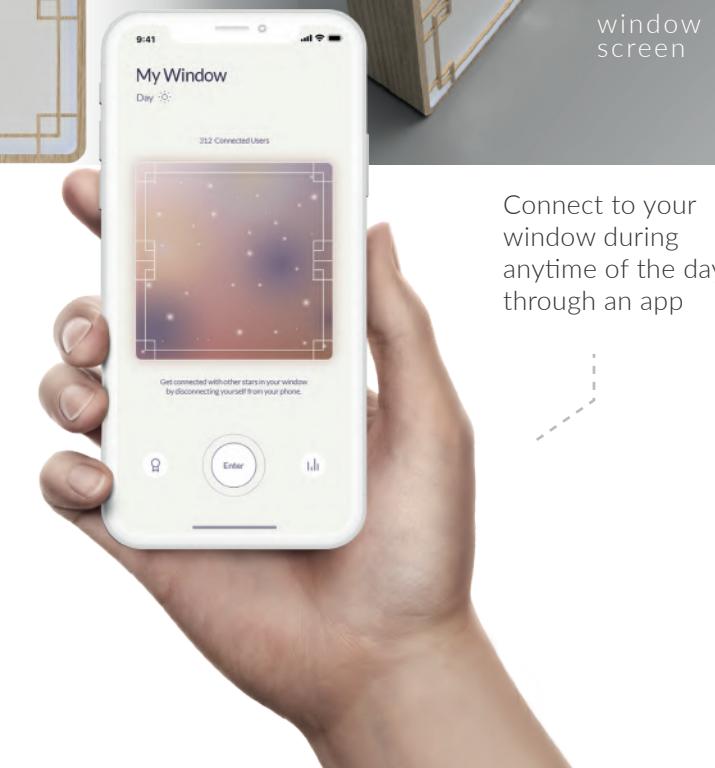

Satisfy your needs to connect

Users can satisfy their needs to belong by simply connecting to people who are disconnected from their phones

Out of sight, out of mind

The device physically hides the phone and helps demotivate users from compulsively grabbing their phones.

Product

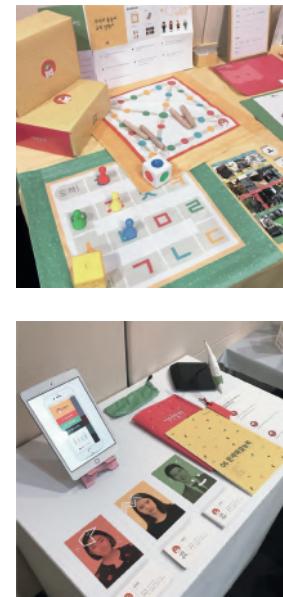

Connect to your window during anytime of the day through an app

Memory Box

Edu-tainment service for dementia prevention

Summary	Time	Type	My Role
A service design that helps elderly to prevent dementia. With Product, Graphic, Interaction Design outcome	03/2017 - 06/2017	Coursework	Primary: Service Design, Product Design, Branding
Team	Duration		Secondary:
Ji Youn Jung Gohyeok Dok Boa Seo	16 Weeks		UI Design

Concept

Memory box is a service that not only relieves the burden of the elderly but also the burden of the family by visiting the home directly. Traditional services provided only content that lacked active stimulation. Memory boxes are provided with parishes to provide more diverse cognitive plays, and content that is not boring, making the prevention of dementia a waiting time, not just an obligation.

Value

Visiting Service

Visiting tutors bring learning materials and visit home directly to relieve the burden

Systematic Care

Provides feedback based on the learning management app provided for tutors to systematically analyze student's status.

Personalized Contents

Provides paper and tangible material to stimulate both of cognitive and mobility ability.

Background

Increasing number of dementia patients as the population ages.

Population Trends and Prospects of Dementia Patients

(Statistics Korea, 2017)

Dementia Prevalence Rate by Age Group

(Ministry of Health and Welfare, 2008)

60-69		3.64%
70-74		5.19%
75-79		11.33%
80-84		17.08%
over 85		30.49%

Cost of spending a year on one person with dementia.

(Ministry of Health and Welfare, 20015)

Key Insight

If dementia is detected in an early stage and delay the progression for two years, **the prevalence rate will be reduced to 80 percent** after 20 years. The severity gets significantly lower too.

Dementia Progress

Minor cognitive disorder

Starts from the central temporal lobe
Duration 7 years

Symptom
short-term memory loss

Minor Dementia

Progression to temporal, parietal lobe.
Duration 2 years

Symptom
Readability problem
Recognition problem
Disorientation

Serious Dementia

Progression to frontal lobe
Duration 2 years

Symptom
Degraded judgment
Increased Impulsion
Shortened attention span

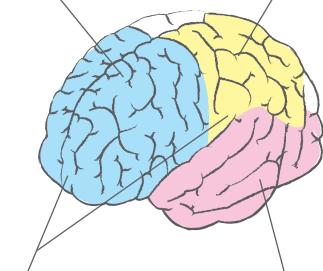

Cognitive ability that gets stimulated from Memory Box contents

Left Frontal Lobe

The process of generating as many words as possible can activate the left frontal lobe of the brain.

Parietal Lobe

- spatial reasoning,
- Recognition ability

Temporal Lobe

The process of learning and storing information can activate the temporal lobe of the brain.

Frontal and Parietal lobe

These area gets stimulated by solving few simple calculating subjects while paying attention,

User Research

In-Depth Interview

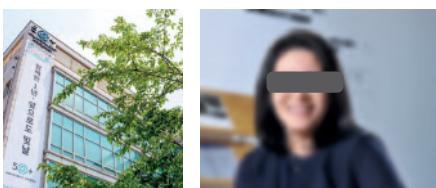

Insight

- Too much detail or detailed feedback may cause resistance
- Have a self-regard issue. Should be careful while approaching

Expert Interview

Head of a department, Seoul 50 Plus Foundation

Insight

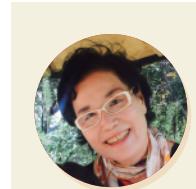

- There are a lot of people with dementia who are illiterate and have a lot of desire to learn Hangul.
- It would be nice to add contents that can recall memories
- A game that can be played simply using existing rules. Try to use one material in different ways

So Eun Park, Ph.D.
Auditory Electrophysiology and Aging Lab
University of Wisconsin-Madison

- Visual training content using color, hand-moving content helps brain activity
- Repetitive cognitive stimulation is crucial
- Input of different senses - auditory, visual, tactile, etc - stimulates different parts of brain

Persona 1

"If you're in your mid-70s or older, you're all about being healthy. When you get old, you don't want anything special, you just want health."

AGE 83

JOB TITLE Housewife

STATUS Married

LOCATION Daegu

Health Conscious
Curious
Passionate

OkSoon Choi

BIO Choi Ok-soon is sensitive to health care. Although her physical function and other health conditions are good, she is worried about changes in her memory or knee as she gets older. Choi Ok-soon's biggest concern is her family. She places the greatest value on spending time with her family. Her goal is to be healthy in her late years so that she won't become a burden on them. Her main concern is preventing dementia, and most of her daily life consists of activities that keep her healthy and prevent dementia. She watches health-related broadcasting programs every day and visit the swimming pool more than four times a week. However, she is not sure exactly what she should do to prevent dementia, and some of the activities she knows are difficult to do consistently.

GOALS

- Live a healthy life
- the steady and easy prevention of dementia in everyday life.

NEEDS

- Help maintain a steady level of health
- Simple and efficient way to prevent dementia

PAIN POINTS

- Concerned about degrading cognitive ability
- Lack of confidence
- Don't do activities that feels boring

PERSONALITY

Persona 2

"Dementia is not somebody else's business. It comes without notice. Hangul is difficult, but I want start learning even if I die tomorrow."

AGE 78

JOB TITLE Self-employed

STATUS Married

LOCATION Seoul

Driven
Curious
Hands-on
Practical

SoonWon Jang

BIO Jang Soon-won recently has become more and more unable to remember what he heard a while ago. When he was young, he often drank alcohol because of his work, and his livelihood was stressful. High blood pressure and hyperlipidemia were also poorly managed. His memory seemed to be getting worse, too. In the end, five years ago, Jang underwent a cognitive test and brain imaging at a hospital. "I'm not Alzheimer's yet, but since I suspect a longitude disorder, let's take a brain nutrient and watch it." He was worried about when it would lead to dementia. It was also unclear whether there would be any way to prevent dementia or how to manage it. If he had a dementia prevention program, he would like to participate, but he had no other option but to go to the hospital regularly. He wants to spend his old age with people who are precious to him, and wants to learn Hangul, which he did not fully learn when he was young.

GOALS

- Prevention of dementia
- Learn Hangul

NEEDS

- Dementia prevention program
- Simple and fun Hangul education

PAIN POINTS

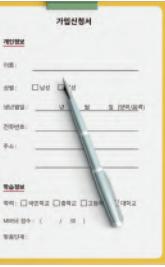

- Takes time to read letters
- Cognitive disorder started
- Sometimes gets shameful of his ability

PERSONALITY

How it works

1

Sign up & Diagnosis

Elderly customers can sign up with personal tutor's help, and they can check up their condition based on Table PC application or print outs.

2

Service Starts

Elderly Customers get assigned to program that suits them, and get notified about pricing plan. Service begins in earnest.

3

Individual Study - paper activity

Using individual study papers and tablet PC, users start individual classes with an help with tutor

Learning levels

Sprout

Tree

Forest

Paper material

Cover

Contents

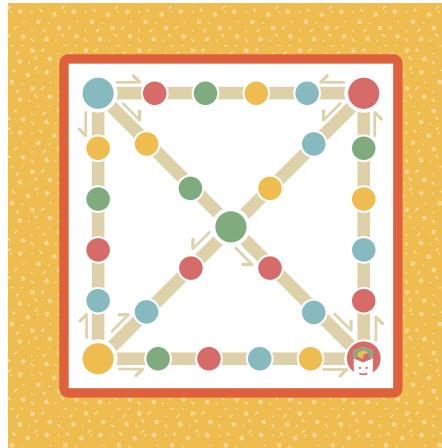

Smart Pen

4

Tangible activity

Users can take part in physical activities in social settings using objects. They can develop hand-eye coordination, hand muscle mobilities, and cognitive skills

5

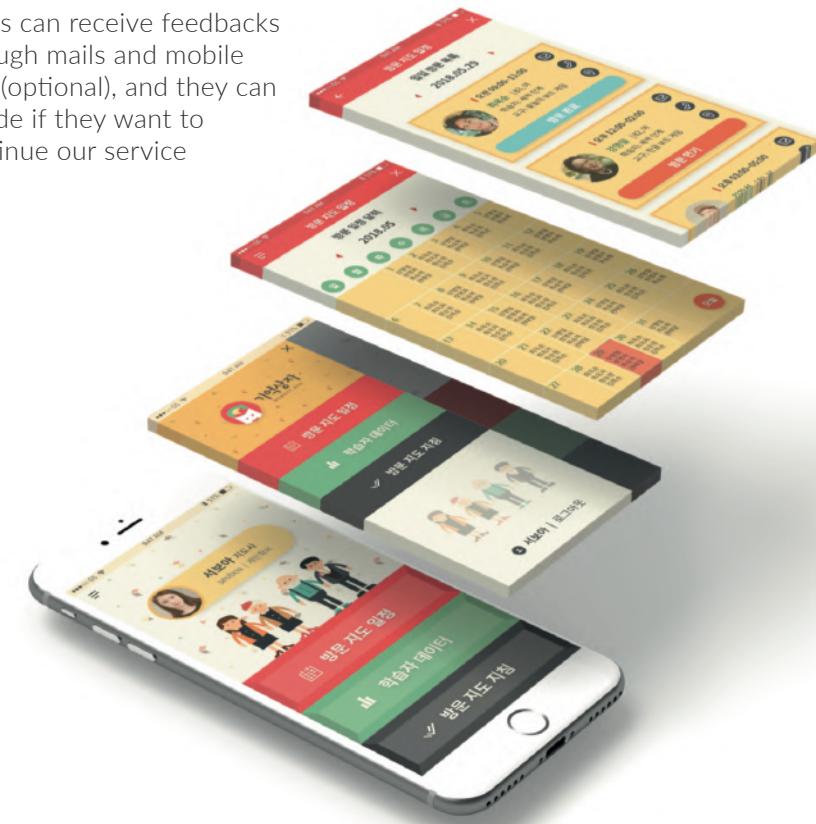

After class

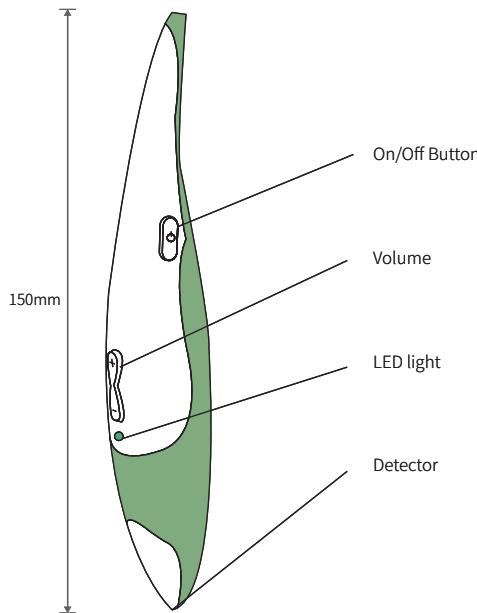

Users can carry out practices with rented paper materials and objects on daily bases, without tutors help

6

Follow-up management

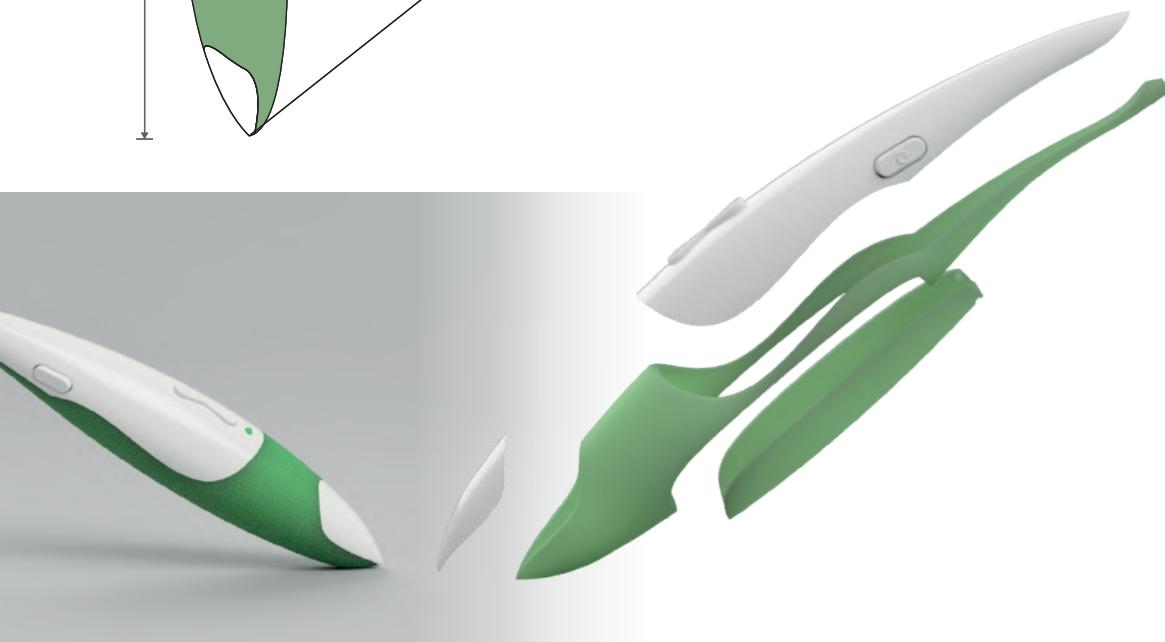

Users can receive feedbacks through mails and mobile apps(optional), and they can decide if they want to continue our service

Smart Pen

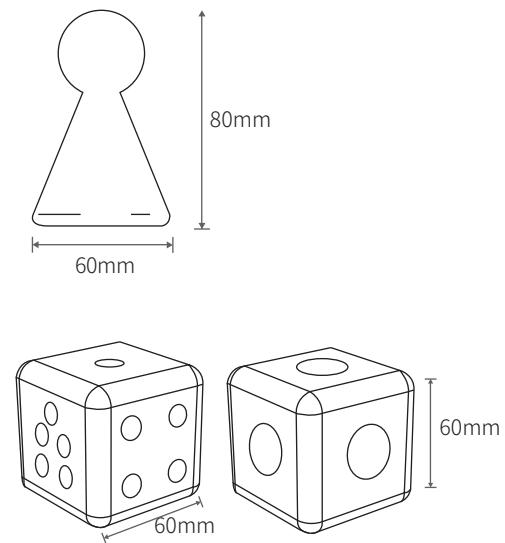

Smart Pen is easy enough for 3-4 year olds to use. Users point smart pen in selected area in paper material. Pen detects the contents and interacts accordingly. This interface not only helps illiteracy learners, but also literate learners. For usability, I picked ergonomic shape and put a number of buttons as minimum.

Alphabet Matching Board Game

Through the matching process, the cognitive function is stimulated, and the learning of Hangul gets easy and fun for illiterate learners. Existing dioceses can be used over a minimum of five weeks, supplementing that they are disposable.

It consists of fabric board, human-shaped horse, dice, jjampong, memory card, etc. and is the form of the front back. A guide-book with the rules of the game is provided.

Brand Application

Walkuni

Walk uni with augmented memory application

Summary	Time	Type	My Role
Inner-circle, walk tracking mobile application that archives and augments memory.	09/2018 - 12/2018	Coursework	Team Leader User research
Team	Duration	Ji Youn Jung	UI design, Prototyping, User testing
	12 Weeks	JeongIn Choi GangHyon Bae	

System Concept Statement

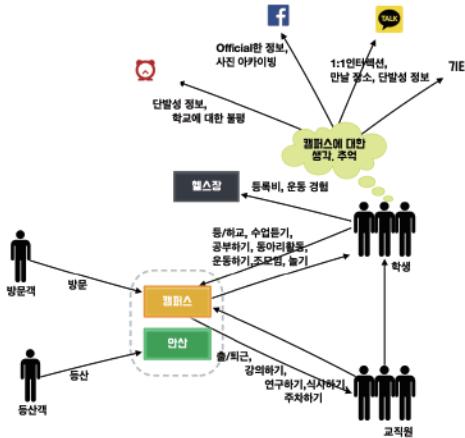

Campus is a place where memories and history of many people are accumulated. In particular, the campus of Yonsei University has a good environment for walking with a large amount of land, including green space, which was created across the surrounding mountains. However, many people lack exercise due to their busy academic lives and do not know much about the space on campus, even though it is a campus where students walk for years and faculty members for decades.

To address these problems, Walk Uni is a campus augmented memory walking service that allows students and faculty members of Yonsei University to walk around campus to share their feelings and find meaningful places. Walkuni allows users to upload individual paths and walk along courses registered by other users. It can be scraped or shared through SNS. As users walk through the course, they can leave the events, thoughts, or memories that have been on the road as a result. This allows users to share each other's experiences and follow the footsteps of other users, giving new meaning to campus itself. It provides motivation through the walking competition system, which uses school numbers and their affiliation to rank each group by the number of steps.

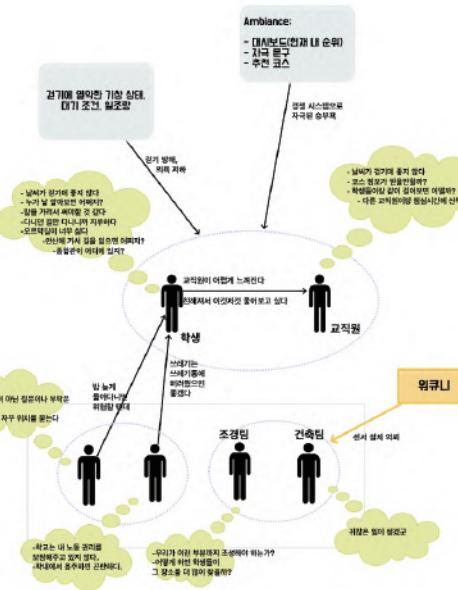

System Sketching

Flow Model Sketch

Initial flow model sketch for the work practice of an organization. A one-page diagram illustrating high-level flow model for the existing work process of your target system.

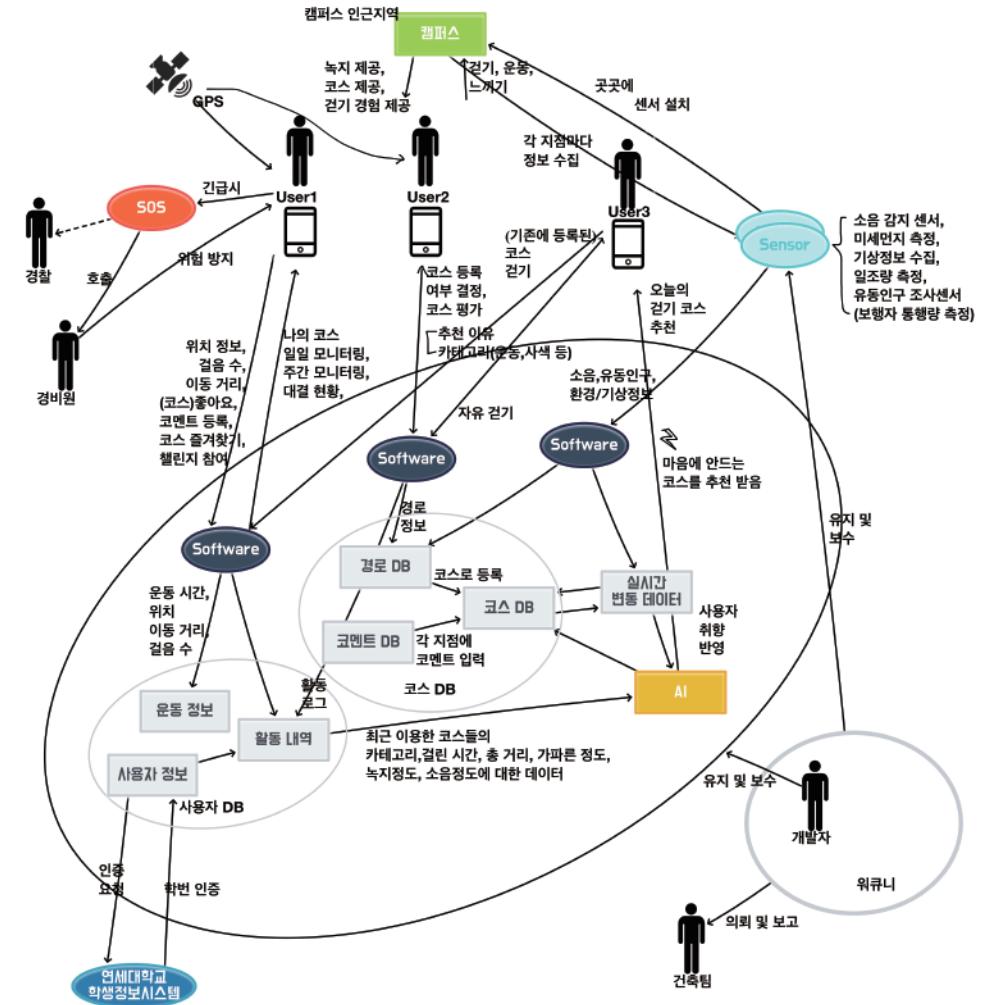

Social Model Sketch

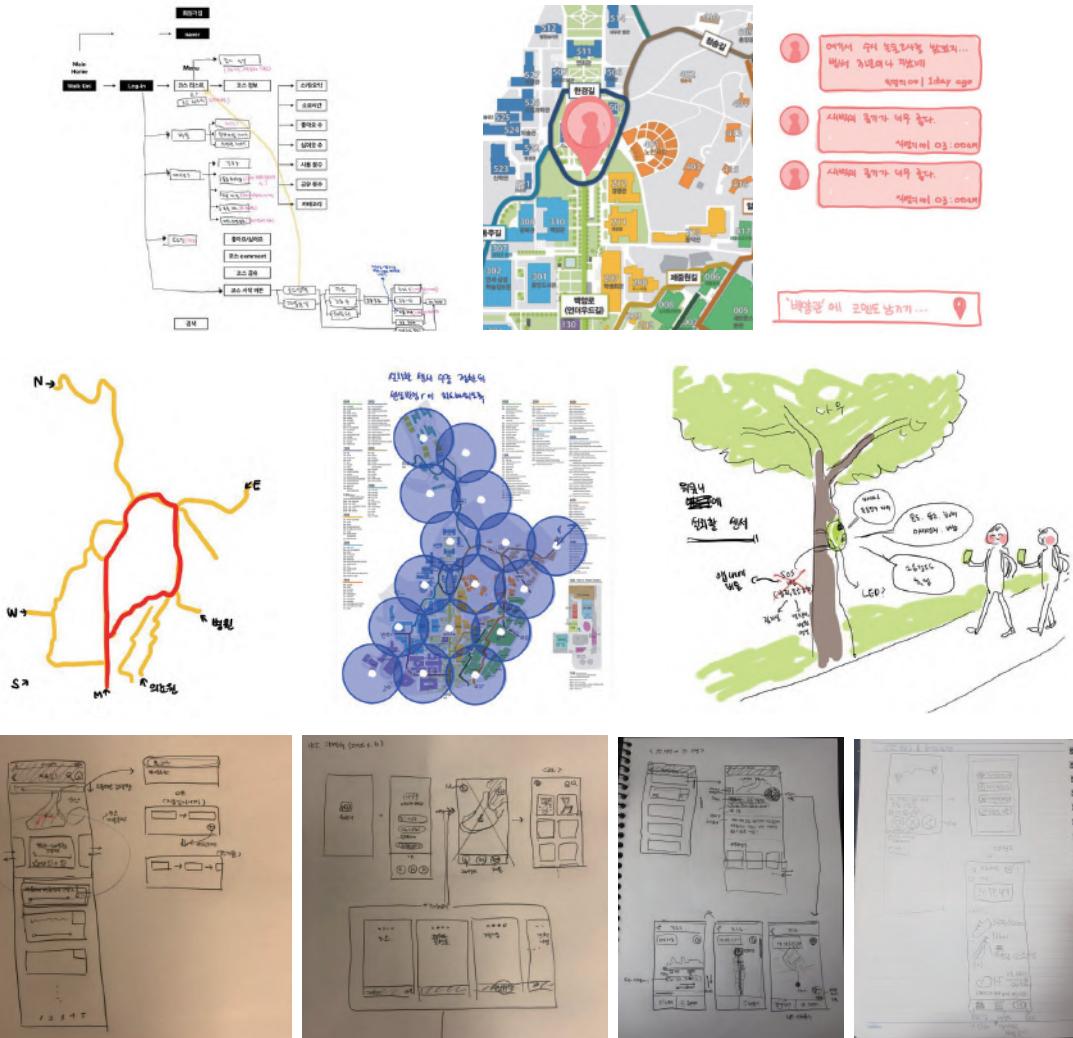

Social Model for our system. Identify social relationships, such as influences between entities, and represent these as arcs between nodes in the diagram.

Flow Model

One flow model diagram for our system, with as much detail as possible.

Sketches

Persona 1

Bio
Kim Ji-won, who lived in Songdo for a year and became a rookie in Shinchon, was embarrassed by the too wide campus. The names of the buildings are so confusing, and it's hard to find one's own major. When we meet at a group meeting with our seniors, they say we want to meet somewhere, but we don't know where we are, and there are quick and easy shortcuts. Even if you ask around, everyone seems to talk about different things. The campus in my high school notebook was so beautiful, but I am sorry that I am not fully aware of it. Spring, summer, fall, and reddish lotus flower are so pretty. They take pictures in front of cherry blossoms in spring and in fall in front of red maple leaves and post them on Instagram. I hope other people will see me so pretty.

Name Jiwon Kim

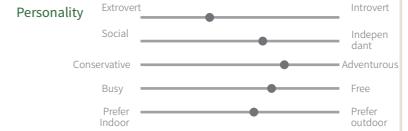

Age 21
Area Seoul
Job Undergraduate
Status Single
Major English literature

Goal Moving Inside Campus Efficiently

Become close to the campus, know every nook and cranny.
Interacting with the people at school

Pain Points
There is no basic knowledge of campus geography.
I don't want to run into a strange student offline.
It's annoying to exercise. I hate uphill.

Needs
Wants to know a shortcut or an efficient route to travel.
Wants to find space or interesting element that I didn't know.
Wants to communicate with the people of the school by sharing my experience about campus.

Persona 2

Bio
Professor Han Sang-hoon wonders what university students are thinking these days. Even when I have a class, I don't ask a lot of questions and ask them something they don't know, because there are no students who come and ask questions or start talking. That's why they try to approach students with an open attitude during class, but they don't seem to be easily. Professor Han Sang-hoon, who attended Yonsei University in his undergraduate degree, said, "The campus of Yonsei University is not just a job but a home."

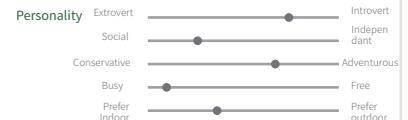

I feel a little underweight since I'm in my 40s. However, as I study in the lab, teach graduate students, and do a few undergraduate classes, I just can't find time. So, I tend to walk alone or enjoy a walk on campus with graduate students and fellow professors.

Name Sanghoon Han
Age 42
Area Seoul
Job Professor
Status Married
Major Psychology

Goal Want to know what students think.
Steady exercise and physical fitness

Needs Easier way to interact with students
A simple exercise in a busy life

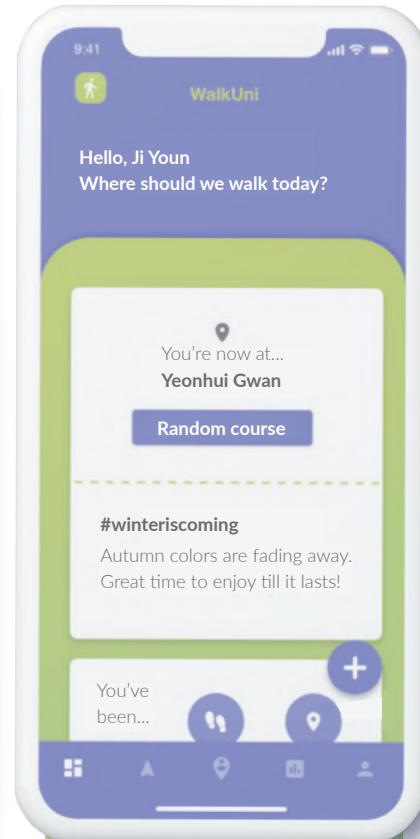

Pain Points
Too busy with one's life
The students find it too difficult of him
Afraid of getting older

	Quality of user experience	User opinion of overall experience	Emotional reaction questionnaire Q1-Q7	Average ratings across users and across Questions

Research questions

1. Does the use of an augmented memory system result in a change in perception of a particular course?
2. After using an augmented memory system, can individual memory be extended to a 'common memory'?

Experimental Design

A Study on the Possibility of Augmented Memory System in Campus

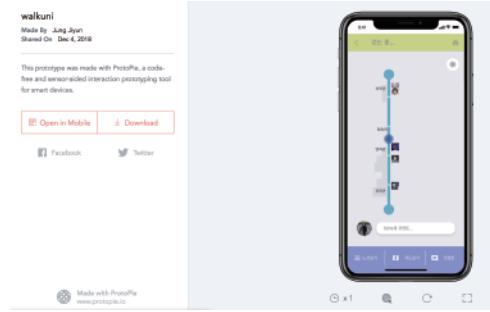

Conduct a experiment, controlling : age, Walkuni experience, course.

#Control group: Walk the same course (path) without Walkuni and answer the question.

Experimental group: Walk the same course (path) while using Walkuni and answer questions.

SMACCO

Quit nicotine without noticing

Summary	Time	Type	My Role
A product service system that helps you overcome nicotine addiction	06/2015 - 07/2015	Coursework	Primary: UX Design, User Research
		Team	Product Design
	Duration	Ji Youn Jung Miji Kwak Nayoung Kim	
	8 Weeks		Note 08/2015 Red Award

Concept

Smart e-cigarettes that automatically reduce the amount of nicotine without you knowing and help you quit nicotine addiction. Through the service, users can share their smoke-cessation accomplishments or receive support from people around them.

How it works

The nicotin-free liquid and nicotine liquid located at the bottom of the liquid cylinder are pressured and move through the hole to the upper part to mix.

When the power button is pressed, current flows through the coil, generates heat of resistance, which evaporates the surrounding liquid.

Evaporated vapor is inhaled by the user through the inlet.

Scenario

1. Nicotine autoregulation / Set-up the time period

(1) Nicotine decreases daily in fixed-rate.

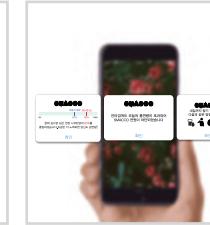

(2) If you put your information, you can check recommended time period and can set up your time period goal.

2. Warning / Block mode

(1) User's smoking informations are recorded through Bluetooth

(2) You get a warning sign and after certain point, your access to the device gets blocked

3. Cheer-up message & SMACCO community

(1) Exchange cheering messages from selected person. Also receives during block mode.

(2) Cheer other users and exchange informations with other users through SMACCO community

4. Nicotine cessation success & Set up maintenance period

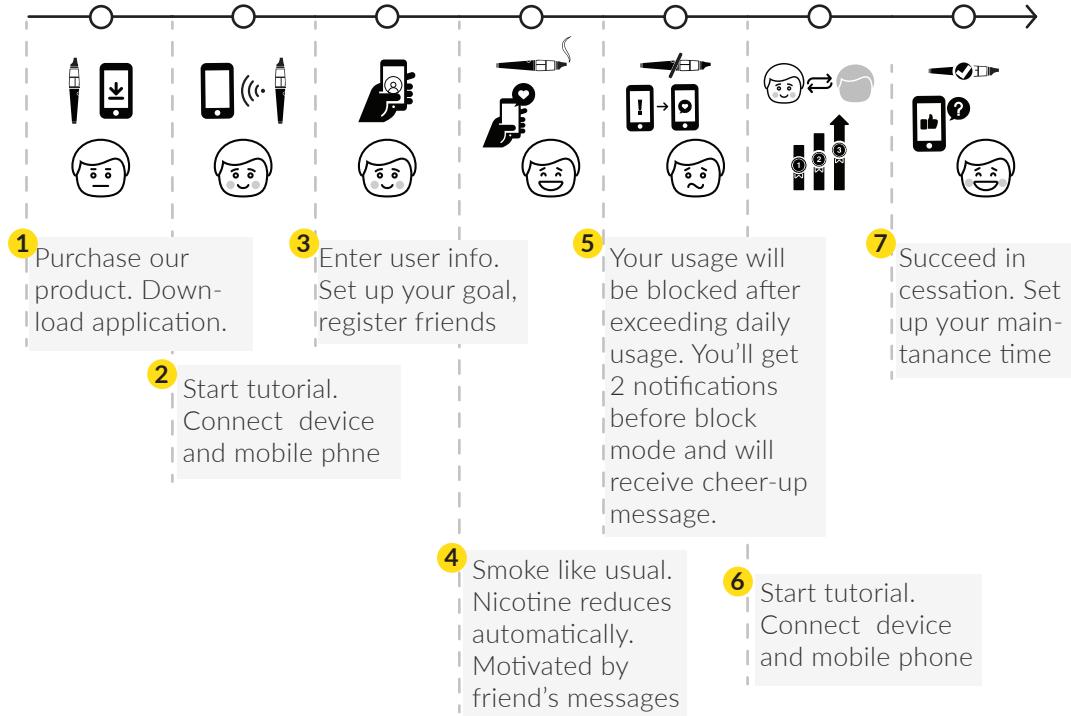

(1) When the goal period is met, you succeed in nicotine cessation, and get a notification

(2) You can use our service to maintain your success
